1.0 INTRODUCTION

The world of cryptocurrencies

is characterized by a multitude of well-known projects with high market cap such as Bitcoin, Ethereum, etc. And by thousands of coins and tokens (over 8000) that are mostly unknown to investors. ▼

The average investor therefore faces a vast choices of possibilities and at the same time the objectives difficulty of choosing those projects that could prove to be real “gems” i.e. projects with very rapid and successful expansion.

This “digital gold rush” has greatly increased the risk of investing in so-called “scam” or “ponzi” projects (in short, frauds): a recent statistic calculated that in 2021 financial scams increased by 27% and the amount of money lost is incalculable. This loss of money also leads to a loss of trust in the world of cryptocurrencies and the **wrong analogy is created cryptocurrencies -> fraud.**

At the same time, start-ups and new projects with a solid and constant development at their base go unnoticed because the so-called “easy money” is a big attraction, finding it difficult to find funding in their icos (initial coin offerings) and in the subsequent purchase of their coin/token. From all this comes the idea of opportunity.

 statement

The team has always believed that the cryptocurrency market is an immense opportunity to grow anyone and where an idea can be realized. We believe that the world must be **protected**.

2.0 PROPOSAL

The projects will be filtered initially through an in-depth study, those that will pass the first phase will be proposed in our social channels and, once the community itself analyzes the results of the study, a vote will be taken: in this way we will have a completely decentralized governance that decides where to direct the investment.

MAIN GOAL

Our main goal is to finance especially eco-sustainable or revolutionary projects that can improve the quality of our life and the life of the earth itself.

IDEA

Our idea is to give the investor the opportunity to be part of a community of people who have been in the crypto world for a long time where they can find and decide, through voting, on which assets to invest in and what kind of strategies to use. at the same time, we would like to support emerging start-ups and green and eco-sustainable projects by giving them visibility and the opportunity to be chosen for any form of financing.

3.0 TOKEN MODEL

The name
of token
is **OPY.**

21 Million

The maximum supply of tokens is **21 million**. All tokens were minted at the start of the project.

4.5%

A number of tokens corresponding to **4.5%** of immediately assigned to opportunity. The maximum supply was opportunity has issued a utility token on bsc blockchain.

3.1 PRACTICAL EXAMPLE

The community votes to buy bitcoin.

The team uses **25%** of the tokens designated for purchase to buy the asset. After a while, the price of bitcoin goes up **40%** generating a profit.

The community (always through voting) decides that the bitcoin asset is to be sold -> the team sells the bitcoin in its possession and buys back the opyx token in order to increase the value of opyx itself.

ASSUMING THAT **10 MILLION OPYX** ARE REPURCHASED:

The team will hold **8 million** tokens for future asset purchases.

2 million will be burned to prevent the value of the token from falling too much.

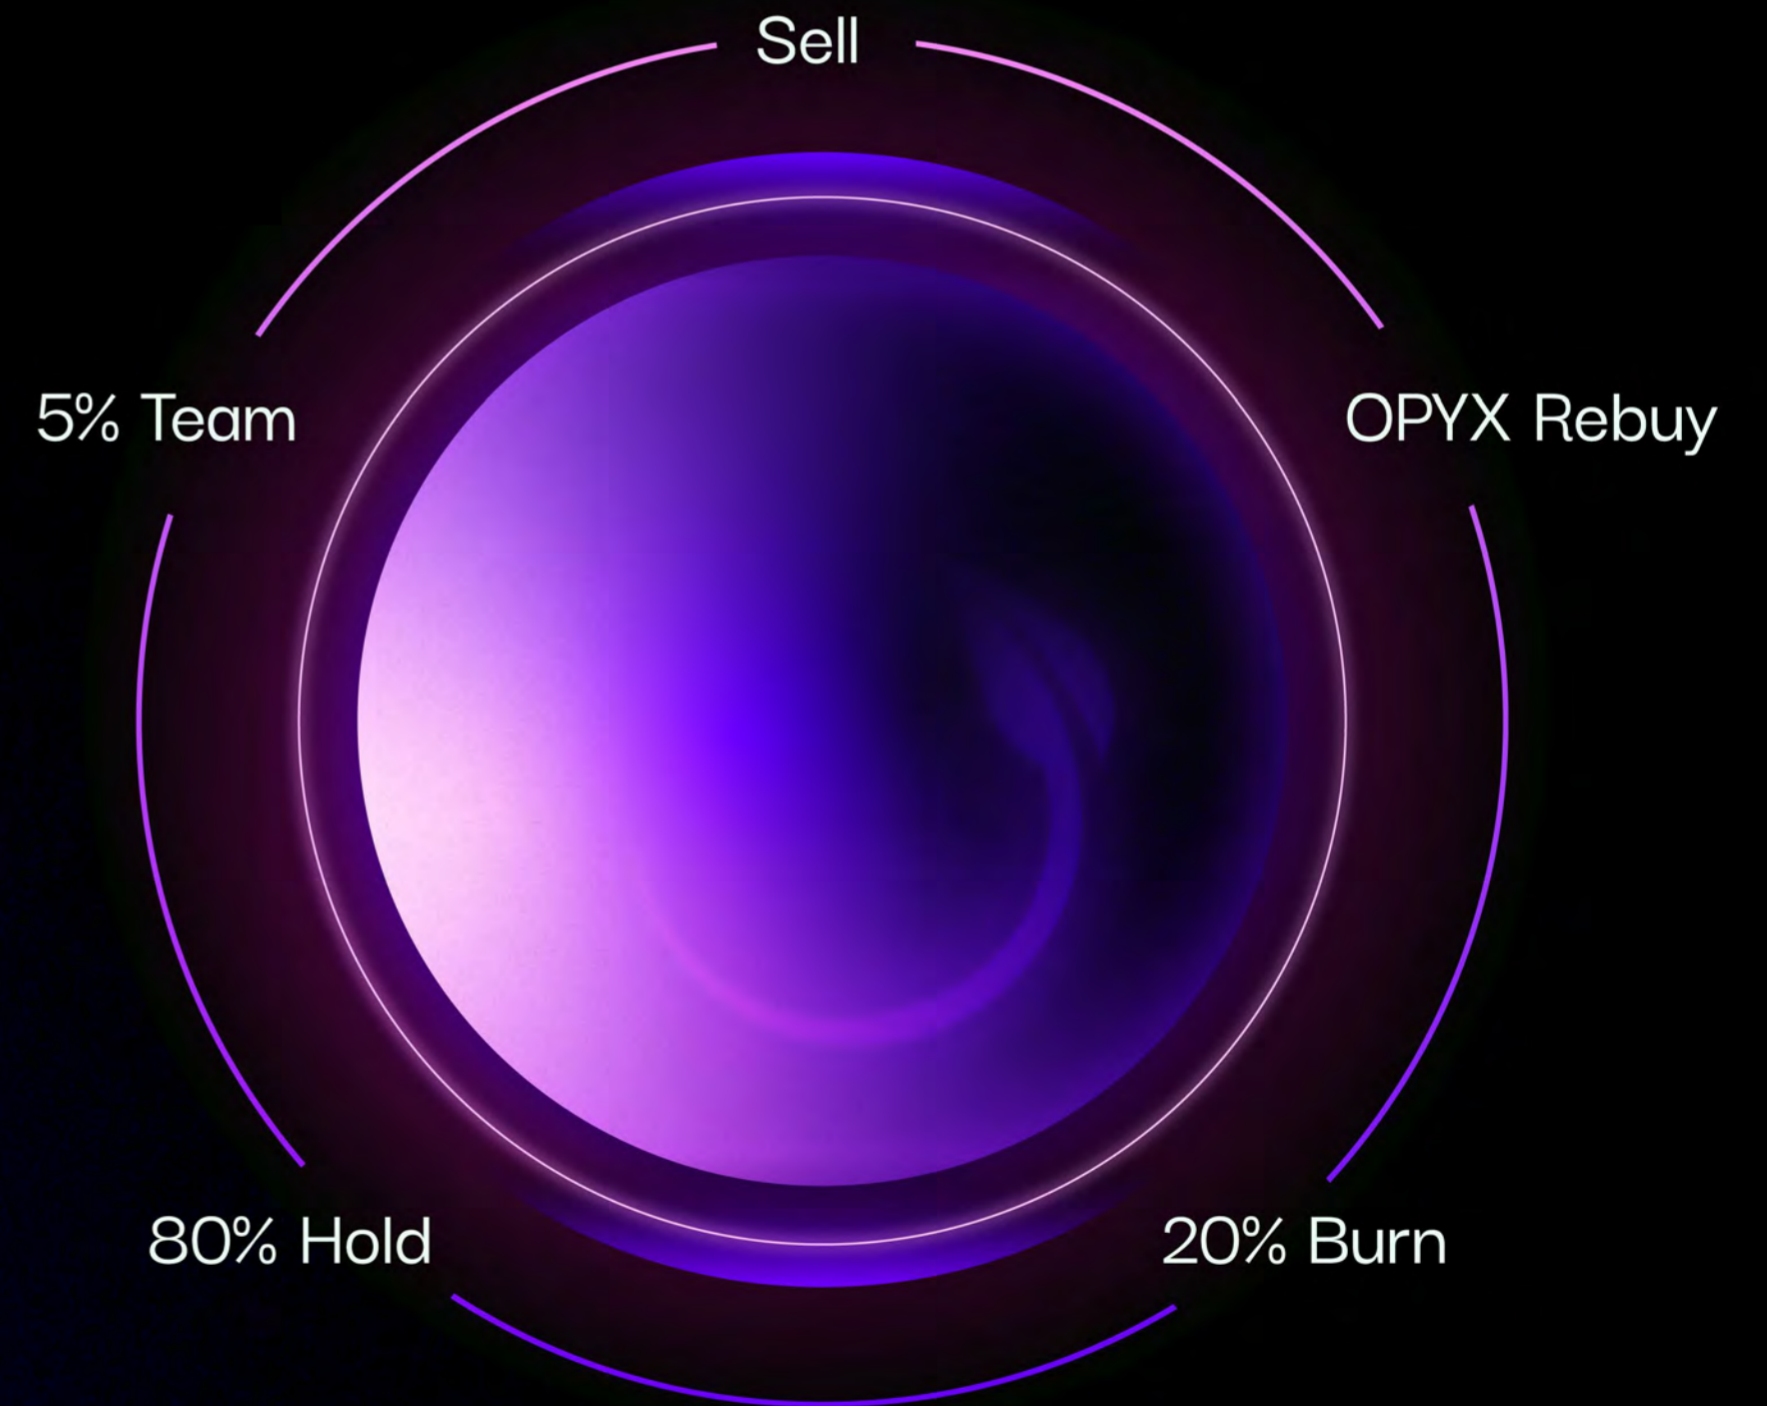

0.5 million will be designated for the team.

3.2 EXAMPLE OF OPERATION & DISTRIBUTION

MAX. Availability	21 Million
Community Distributed In 5 Years	15.000.000

Tokens designated for asset purchase will be taken up to a maximum of 25% of the annual circulating supply

Develpoment	750.000
Marketing	750.000
Team	1.050.000
Token For Asset Buy	3.450.000

ECOSYSTEM

Ecosystem

MAIN CORE

Ecosystem

MR OPY NFT

Ecosystem

MINING

MR OPY NFT

The **“MR. OPY” NFT** project in the opyx ecosystem is a groundbreaking initiative, offering a diverse range of NFTs with varying levels of rarity and a multitude of practical applications.

These NFTs are uniquely designed and cater to various use cases, including digital collectibles, integration into gaming, staking for rewards, participation in digital art marketplaces, community governance, and cross platform compatibility.

This project redefines the concept of NFTs by providing versatile digital assets that enhance the experience for collectors and participants in the opyx ecosystem.

MINING

The mining project in the opyx ecosystem is a collaborative effort, leveraging geodnet miners through our partnership with them and incorporating planetwatch's environmental data mining.

This project combines the computational power and security of geodnet miners with the data-driven insights from planetwatch's environmental data mining.

The key outcomes include data-driven environmental insights, ecosystem synergy, and a commitment to addressing environmental challenges and sustainability within the blockchain ecosystem.

5.0

ROADMAP

SOCIAL GROWTH & OPENSEA BLUE CHECKMARK:

- Enhance social presence and engagement.
- Pursue verification with the blue checkmark on OpenSea.

GOVERNANCE FOR ASSET ACQUISITION:

Establish governance mechanisms to facilitate the purchase of assets.

COINMARKETCAP (CMC):

Pursue a listing on CoinMarketCap, another widely used cryptocurrency market data platform

STAKING WITH "MR. OPY" NFT:

Implement a staking mechanism using "Mr. Opy" NFTs

LISTING ON CENTRALIZED EXCHANGES (CEX):

Explore opportunities for listing on various centralized cryptocurrency exchanges to increase liquidity and accessibility for traders and investors.

MARKETING

Develop and execute marketing strategies to reach a wider audience.

LAUNCH MYSTERY BOX NFT "MR. OPY" ON BINANCE SMART CHAIN (BSC):

Plan and execute the launch of the "Mr. Opy" NFT mystery box.

COINGECKO:

Work on getting listed on Coingecko, a popular cryptocurrency data platform.

DEVELOPMENT OF THE ITALIAN GEOD MINER NETWORK:

Focus on expanding and enhancing the Italian GEOD miner network.
